- Write a C program based on the pseudocode in **PseudocodeC.txt**.
- It must be able to process the file **2018-January-Averages.txt** which contains four columns of daily averages with headers. This file contains comma separated values.
- Assume all values in this file are valid, and do not write code for unexpected invalid data.
- The program output should be like the following, including quotes and numeric alignment.

```
Type the filename to process >2018-January-Averages.txt
